

FITBUDDY

AI Fitness Plan Generator using Gemini Models

OBJECTIVES DOCUMENT

1. Main Objective

The main objective of FitBuddy is to develop an AI-powered fitness plan generator that creates personalized workout and fitness guidance based on the user's details, fitness goals, activity level, and preferences using Google Gemini models.

2. Specific Objectives

- To collect basic user information such as age, fitness goal, activity level, and workout preferences.
- To generate personalized workout plans that align with the user's stated fitness goals and experience level.
- To use Gemini models to provide clear, easy-to-understand fitness suggestions and plan descriptions.
- To present fitness plans in a simple and user-friendly interface.
- To help users organize their workouts with structured exercises, duration, and suggested frequency.
- To provide general fitness guidance while reminding users to consult qualified professionals when they have medical concerns or special health needs.
- To validate user inputs and handle API or network errors with clear messages.
- To build a project that can be maintained and improved with additional features in the future.

3. Expected Outcome

The expected outcome is a working web application that accepts user fitness details and generates a structured, personalized fitness plan with the support of Gemini models. The system is intended for general fitness information and does not replace medical advice or professional supervision.

Project Name: FitBuddy – AI Fitness Plan Generator using Gemini Models
